

Special Notes

TS ODBC DataServer™ 8.6.0

All versions:

Due to the modifications made to improve the performance, it is required that both the client and server components of this product are loaded when replacing prior versions. Failure to do so will result in errors when accessing data.

Windows 2000/NT/XP Server Multiple-Tier only:

1. The Expose Utility must be run from a Basic environment executed at the console of the Windows 2000/NT/XP Server system. An attempt to run the utility from one of the client systems using the Network Basic will not properly create the INI file required by the TS ODBC DataServer server process.
2. When using the TS ODBC DataServer in conjunction with a Network Basic environment, it is necessary to execute the Expose Utility with an IPL file that is defined without DataServer reference on the directories that point to IDDBD, the data files and the TS ODBC DataServer files.
